DETAILED ACTION

This Office Action is a response to Applicant's Preliminary Amendment filed August 18, 2004 and September 20, 2004.

Claims 1-32 are pending in the instant application.

Claims 1-32 are subject to restriction as detailed below:

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Group I. Claim 2, drawn to a double stranded polynucleotide comprising no ribonucleotides, classifiable in class 536, subclass 24.5, for example.
- Group II. Claim 3, drawn to a double stranded polynucleotide comprising ribonucleotides, classifiable in class 536, subclass 23.1, for example.

Claims 1 and 4-32 links inventions of Groups I and II. The restriction requirement between the linked inventions is subject to the nonallowance of the linking claims, claims 1 and 4-32. Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application. Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the

Art Unit: 1635

continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are directed to related compositions. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, the inventions of Groups I and II are patentably distinct since they are directed to chemically distinct structural molecules, namely RNA and DNA double stranded molecules. These compounds are known in the art to possess different modes of operation because, for example, the double stranded DNA can bind an RNA molecule having a complementary sequence and recruit the activity of RNase H to cleave the RNA target, thereby reducing expression of the gene encoding the target RNA. On the other hand, the double stranded RNA molecule can bind to an RNA having a complementary sequence and recruit the activity of the post-translational gene silencing machinery thereby resulting in the modulation of the expression of the target gene expressing the RNA comprising the complementary sequence. Because these groups have unique structures, the inventions are also therefore not obvious variants, and have at least a

materially different design. Since it is a burden to search and examine these multiple inventions in a single application due to the fact that the searches are divergent and non-coextensive, restriction is proper therefore.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(l).
